To whom it may concern:

Hello. Enclosed are the estimated costs for an Autologous Peripheral Blood Stem Cell Collection and Transplant at Mayo Clinic. The pre-service deposit required prior to the evaluation is \$55,000.00. Upon completion of the evaluation if the patient is a candidate for the transplant an additional \$160,000.00 is required in order to proceed with the transplant. If the patient needs Plerixafor, that is an additional \$8,500.00 per injection. Patients are responsible for all costs related to non-medical expenses (travel, food and lodging) or medical expenses incurred while on the waiting list for a transplant.

Chemotherapy has been recommended as well. An estimate based only on the patient's current weight/height would be approximately \$4,400.00 per treatment day. Each chemotherapy cycle consists of two days thus the total cost for each cycle would be approximately \$8,800.00. The patient may want to request a new estimate once chemotherapy has been scheduled. The patient is responsible for all financial costs of proposed treatment.

Thank you,
